# OUR SERVICES

**Security Surveillance, Access Control,  
Technical Services, and Information Technology**

## **CCTV Security System**

A video surveillance system can help many owners and users protect their belongings while developing a safe environment around the residential. With the intelligent technology improvement, the network video recorder (NVR) system has featured remote access via the internet. You can easily access your security system and monitor your home through your laptop and smartphone.

Dahua and Hikvision CCTV are the most preferred security camera brand for the customer. The customer has satisfied with the performance and features that both brands provide, such as IR infrared, WDR technology, built-in audio and mic. For plug-and-play CCTV, we will suggest customers go with EZviz CCTV. It has an easy installation step yet extremely powerful and suitable for your home. Its highlight features are two-way communication, tilt-pan 360 degrees view, and a wire-free security camera.

## Access Control & Door Lock System

An access control is a security mechanism that regulates and manages the entry or use of physical or digital resources within an organization or a specific location. The primary purpose of access control is to control and monitor who has access to certain areas.

## Auto Gate System

An auto gate system facilitates the movement of vehicles going in and out of landed homes. It is a secured gate system that helps owners to save time simultaneously. The gate is not able to open with force, instead, only those who are allowed access can enter the yard. We offer sliding auto gates and swing arm auto gates for your home.

## Home Alarm System

We offer two types of alarm systems, wired alarm systems and wireless alarm systems. We try to provide a complete alarm solution for your home and business that suits your needs. Our objective is to make people aware that burglar alarm can save their properties and protect their beloved ones. Vivos and Bluguard alarm system is our best selling since we established this company. We have an experienced technician and installation team to fulfill your requirements.

## Key Phone & Intercom System

The key phone system usually suits small and medium-sized businesses. It allows users to call in-office extensions and allows only a single user to hold the line. The number of extensions supported by this system ranges from five to forty extensions.

The design makes communication in the organization smooth and efficient. Hikvision video intercom provides efficient and convenient two-way audio and video verification for entry control. The best part is video intercom systems can be integrated with CCTV and alarm systems.

## Turnstile & Barrier Gate System

We supply a wide range of turnstile gates such as full-height turnstiles, optical swing turnstiles, optical flap turnstiles, and tripod turnstiles. All these turnstile gates have their safe access during emergencies and power outages. Turnstile arms completely collapse, to ensure users can exit the lane in an emergency. When the power is on, the arm will automatically lift up to form a fast lane.

We also provide barrier gate system solutions suitable for indoor and outdoor parking areas at airports, shopping malls, warehouses, hotels, factories, condominiums, car rental companies, and others. It can also be customized to be used together with any auto-pay ticketing parking or access control system. With technology improvement, it can handle high traffic fast through.

## Guard Tour System

A guard tour system is a system used to help companies and organizations organize, log, and execute guard tours and patrols in their assets ensuring that the officers will accomplish their tasks within the predefined time intervals. This helps prevent "Laziness" and makes sure your guard is on duty. Guard tour systems provide a means to check and record the time that a guard executes his guard tour by scanning specific check points assigned to the area he patrols.

## Automatic Door System (ADS)

ADS provides the very best in door automation solutions, making access to your home or business more convenient for visitors. Almost any type of door can be automated. Subject to your existing door being in good condition it is possible to retro-fit automatic door openers to your door. A door opener can be fitted to all types of doors: sliding doors (patio doors, internal pocket doors, glass sliding doors) or swing doors (hinged front doors or hinged back doors).

## Queue Management System

A queue management system is used to streamline customer flow through businesses such as banks, hospitals and government offices that get large crowds of people during working hours. Instead of making them all crowd inside the branch waiting for service, the queue system will issue paper or SMS tickets to each person who joins the queue, so they can arrive just in time to be served.

## Smart Home Automation System

A smart home refers to a convenient home setup where appliances and devices can be automatically controlled remotely from anywhere with an internet connection using a mobile or other networked device. Devices in a smart home are interconnected through the internet, allowing the user to control functions such as security access to the home, temperature, lighting, and a home theater remotely.

## Wifi System

Enjoy smooth connectivity at home and business with our collection of mesh Wifi products from established market leaders like Asus, TP-Link, D-Link and more. Extend Wifi coverage throughout your home and offices for seamless connectivity in every corner. Mesh routers are an easy and the latest technology to boost connectivity instantly be it at home or offices.

## Satellite Master Antenna Television (SMATV) System

A SMATV system is a type of satellite television system that is commonly found in multi-unit residential complexes or buildings. In contrast to a standard satellite television system, which employs a single dish to receive satellite signals, a SMATV system uses a central antenna to receive satellite signals and distribute them to various outlets within a building.

## Public Address (PA) System

A PA system is an electronic system that includes a microphone, amplifier, speaker and related equipment. This PA System increases the apparent volume of vocals, musical instruments, other sound sources, or recorded sounds or music. The sound enhancement system can be used in public places where announcers, performers, etc. and need to hear in a remote or large area. Typical applications include sports fields, public transport and facilities, live or recorded music venues and events.

## Fiber To The Home (FTTH)

FTTH is a broadband internet connection technology that uses optical fibre to deliver high-speed broadband internet directly to individual buildings such as households, apartment complexes, and businesses. Unlike traditional twisted pair or coaxial cable networks, fibre optic cables made of thin strands of glass or plastic fibres can transmit data over long distances using light signals that are less prone to interference and signal loss as their copper counterparts.

## Networking & Structure Cabling

Most structured cabling solutions include data cabling the most basic type of structured cabling system fiber optic cables, and modular connectors. These cables and connectors are laid in line with network topology standards to establish the data and voice communication system of an office, college campus, data center, or other location.
